                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to isolated nucleic acids and proteins encoding human soluble 4 transmembrane superfamily receptor protein (see AAC90012-C90023 and AAB49502-B49513). The present sequence is one such protein. The present protein can be used to screen for binding partners and molecules which modify its activity. Antibodies specific for the present protein can be used to tract and/or prevent diseases associated with abbarant expression or activity of the present protein e.g. andocrine disorders e.g. Addison's disease, (cardio) vascular diseases

                                                                                                                                              The PNB and proteins of the invention are predicted to have biological activities which would make them suitable for treating, preventing or activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immulating (e.g. as vaccines) or suppressing activity, hemostatic cativity, and thrombolytic activity, tissue growth activity, hemostatic and thrombolytic activity, chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chemotactic/chem
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 LDPVWLFVVVGGVMSVLGFAGCIGALRENTFLLKFFSVFLGLIFFLELATGILAFVFKDW 120

The invention relates to novel human secreted proteins, the nucleic acids encoding them. The protein may exhibit cytokine, cell proliferation or cell differentiation activity or may induce production of other or cell differentiation activity which is useful for the treatment of cytokines in certain cell populations and may exhibit immune stimulating or immune deficiencies and disorders e.g. severe combined confirmance disorders e.g. severe combined immune deficiency (SCID), autoimmune disorders including tissue, skin and organ transplantation and in systemic lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary inflammation. The proteins are also useful in the treatment of diseases cond disorders including tissue, skin and organ transplantation and in graft-versus-host diseases (GVHD), in the induction of tumour immunity, confirmation or lymphoid cell deficiencies, wound healing and tissue repair, confirmancery processes, diseases of the peripheral nervous system, inflammatory processes, diseases, funtington's disease, inflammatory processes, disease, Huntington's disease, osteoporosis or osteoarthritis, mediated by inflammatory bowel disease, ulcers, bone regeneration. The protein having activities and shy-brager syndrome, infections, infarction of cardiac and central nervous system vessel e.g. stroke, gepsis, inflammatory bowel disease, ulcers, bone regeneration. The contraceptive based on the ability of inhibins to decrease fertility in female mammals and decrease spermatogenesis in male mammals. The recont second acids are also useful as a food supplements. The recont second acids are also useful as food supplements. The processes are also useful as food supplements.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 LDPVWLFVVVGGVMSVLGFAGCIGALRENTFLLKFFSVFLGLIFFLELATGILAFVFKDW 120

cytostatic, anti-inflammatory, immunomodusatic, virturaray, interary, currestatic, and anti-inflammatory activity and acting as cytokine modulators, and anti-inflammatory activity and acting as cytokine modulators, haematopoiesis regulators, tissue growth modulators and/or cadherin suppressors. The polypeptides and polymucleotides are useful in gene therapies, particularly for preventing, treating or ameliorating any of the following diseases: immune deficiency and disorders; e.g. bacterial or fungal infections, autoimmune disorders, cancer, systemic lupus erythematosus or graft-versus-host disease; myeloid or lymphoid cell deficiencies; wound, burns, incisions and ulcers, osteoporosis or osteoarthritis, central and peripheral nervous system diseases and neuropathies, e.g. Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis or Shy-Drager syndrome; chaemophilla, cardiac infarction or stroke; inflammations, shock, sepsis or systemic inflammatory response syndrome, ischaemia-reperfusion injury, endotoxin lethality, arthritis, inflammatory bowel disease or crown follows or pemphigus or pemphigus or pemphigus or pemphigus or cancers, pemphigus vulgaris or pemphigus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                  This sequence represents a novel rat gamma-hydroxybutyrate receptor

(GHBR) isolated from rat brain hypocampal cell cDNA library. The

invention relates to the isolation of this novel sequence, fragments of

it and homologues of the sequence except for those homologues that having

GenBank accession numbers AAC 17120 (human tetraspan NET-4), AA615405,

AA697250 or Af1467230. GHBR is the receptor for gamma-hydroxybutyrate in

the rat brain and is involved in regulating dopaminergic, opioid and

GABA(gamma-aminobutyric acid) ergic activities. The nucleic acid that

encodes the protein is used: (1) as primers or probes for detection and

amplification, particularly for screening gene libraries to identify

promoters and regulators of the GHBR gene; (2) for expression of

recombinant polypeptides; and (3) to detect allelic variants, mutations,

gene (for diagnosing diseases) or susceptibility, associated with

abnormal expression of GHBR). The protein (or cells and transgenic

animals expressing it) is used: (1) to screen for agents that interact

with GHBR; (2) to study expression/activity of the receptor, including

its interaction with other compounds; and (3) to raise antibodies (Ab)

specific for GHBR. The Ab are used to prevent or treat diseases associated

with abnormal expression or activity of GHBR, particularly those

involving cerebral GABA(gamma-aminobutyric acid)ergic and/or dopaminergic

with abnormal from addictive drugs, neurodegeneration (Parkinson's disease),

conversed to prevent or for experimental disease),

withdrawal from addictive drugs, neurodegeneration of hormone (growth

permone and prolactin) that are under dopaminergic control.

AA761250 to AA263350 represent 97 isolated human secreted protein genes.

AA776124 to AA77623 are the secreted proteins encoded by the 97 human genes encoding this protein was found to be on chromosome 10.

Genes The gene encoding this protein was found to be on chromosome 10.

The genes and their corresponding secreted polypeptides are 10.

e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 97 genes, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, tummours, developmental abnormalities and foetal deficiencies, blood disorders, diseases of the 1 mmune system, autoimmune diseases, inflammation, allergies, Alzheimer's and cognitive disorders, atherosclerosis, diabetes, cardiovascular disorders, kidney disorders, dispetides are also useful for identifying their binding partners.

The secondaries are also useful for identifying their binding partners.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                65 WLFVVVGGVMSVLGFAGCIGALRENTFLLKFFSVFLGLIFFLELATGILAFVFKDWIRDQ 124

The invention relates to novel secreted/transmembrane proteins, and nucleic acids encoding them. The novel proteins are designated TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, TANGO 319, T

The invention also provides TSPAN-7 polypeptides and polymolectides TSPAN-7 inhibitors are useful for inhibiting proliferation of mammalian cells, including tumour cells, for decreasing the side effects of cancer therapy and for treating neoplastic diseases. They are used to modulate TSPAN-7 expression and function in cancer cells, particularly in prostate cancer cells. They are also used in antisense therapy. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; tetraspan protein; TSPAN-7; hyperproliferative disorder;
neoplastic disease; prostate cancer; antisense therapy; tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New inhibitor of tetraspan protein useful for reducing the exp
or activities of tetraspan protein in cells, and for treating
hyperproliferative disorder, especially cancer in a mammal
                                                                                                                                                                                                                                                                                                                                                            AAE18535 standard; Protein; 270 AA.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 41,
